

Our editorial staff is preparing the following key topics:

Show issue ICE Europe and CCE International

Show preview, opinions and analysis - our editorial team reports on in the first print editions of the new year of Flexo+Tief-Druck (German) and Flexo & Gravure Global (English) as well as on their online portals and social media channels about the two trade fair events ICE Europe and CCE International in Munich. The exhibitors with their product solutions are in the foreground of our coverage!

Quality control

→ Potentials of inline spectral measuring devices

Typical application scenarios, construction methods, software interfaces and tips for their evaluation.

→ Colour management – proofing and colour separation in package printing

Specialized software solutions provide powerful tools for proofing and colour separation in CMYK and multicolor environments.

→ The current status of UV LED flexo printing

UV LED radiation sources open up new opportunities for UV flexo printing. All participants in the value chain must deal with the new requirements.

→ A real challenge – First Time Right

What have substrate suppliers, colour manufacturers, machine and system producers, prepress service providers and printers do to make „First Time Right“ a reality in package printing?

MIS- and production software – solutions for package printing

“Wrinkle free” web travel

The intelligent interaction between web guiding, web edge-control and web tension control are decisive elements for getting the substrate wrinkle-free through the machine. What must be taken into account?

Electrostatics for print and converting applications

Different system solutions in the market „neutralize“ the electrostatic charges on the film web and reduce charges trapped in the film substrate.

Recycling of (packaging) films

New! Special Extrusion & Converting

Flexo+Tief-Druck in her new special "Extrusion & Converting" deals intensively with the current challenges in film production and further processing. The first special deals with the following topics:

- **Extrusion: How to create a printable packaging film?**
- **Too loose, too tight and not straight edged – How to wind difficult substrates**
- **Web travel in the press: Inspection, control and pre-treatment**
- **Latest developments of lamination machines**
- **Current developments in laminating adhesives**

The task of lamination is to combine the material properties of individual films into a new material with outstanding properties. The result is customized composite films for the production of flexible packaging with high protection. In this case, the adhesive used is of crucial importance for the error-free production of composite films.

- **Slitters/rewinders: Frequent faults at reel confectioning**
